

Full Test Report - NanoServe

Full Test Report - NanoServe

Date: 2026-07-25

Platform: Linux x86_64, Pop!_OS / Ubuntu-class

Engine: C++23, AVX2 CPU backend

Verdict: ALL TESTS PASSED

Executive summary

NanoServe's automated test suite validates the Rust buddy allocator, C++ inference engine FFI, Python SDK, quantization

Test environment

Results matrix

Total: 14 passed, 0 failed, 0 skipped

How to reproduce

cd NanoServe

source .venv/bin/activate && source .env.nanoserve

python3 tests/test_suite.py

Expected output ends with `14 passed` (or equivalent success summary).
